Exam : Copado Robotic Testing

**Title : Copado Robotic Testing
Certification Exam**

Version : DEMO

1.Copado Robotic Testing Advanced Knowledge Test > TRUE or FALSE

You can add agent capabilities before or after setting and enabling the QConnect package.

- A. True
- B. False

Answer: A

2.Which concept allows users to create test cases based on action words?

- A. Keyword-driven testing
- B. Verb-driven testing
- C. Action-driving testing
- D. Alphabet-driven testing

Answer: A

3.Help Mark find the right answer!

- A. The repository that Mark has assigned to the suite is faulty. This is why Copado Robotic Testing can't recognise the test case and disallow the use of Q Editor.
- B. The branch or the tag that Mark has referenced while adding the suite is not available in the repository.
- C. While linking the locally-networked repository to the suite, Mark had provided some additional parameters which restrict the use of QEditor.
- D. Mark added the suite using the custom Git. This suite adding method does not provide the QEditor accessibility.

Answer: B

4.What according to you is the correct definition of Tags?

- A. Tags is the first element in your test structure that explains what your test case is intending to achieve.
- B. Tag is used to create custom keywords in Copado Robotic Testing.
- C. Tags is a syntax used to classify your test cases.
- D. Tags enable you to identify which library you should be implementing for test execution.

Answer: C

5.Which phrase BEST fits this definition?: It is a unique security token that is generated to verify the authority of accessing QConnect and Copado Robotic Testing.

- A. Scripting syntax
- B. Combinatorial access key
- C. Authorization string
- D. API key

Answer: C
