Exam : NSE5_FMG-6.2

**Title : Fortinet NSE 5 -
FortiManager 6.2**

Version : DEMO

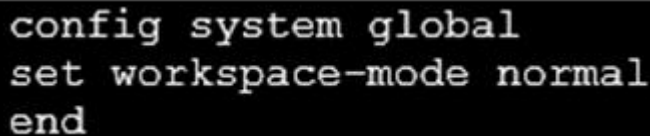

1.An administrator has enabled Service Access on FortiManager.

What is the purpose of Service Access on the FortiManager interface?

- A. Allows FortiManager to download IPS packages
- B. Allows FortiManager to respond to request for FortiGuard services from FortiGate devices
- C. Allows FortiManager to run real-time debugs on the managed devices
- D. Allows FortiManager to automatically configure a default route

Answer: B

2.Refer to the exhibit.

```
config system global
set workspace-mode normal
end
```

Given the configuration shown in the exhibit, which two statements are true? (Choose two.)

- A. It allows two or more administrators to make configuration changes at the same time, in the same ADOM.
- B. It disables concurrent read-write access to an ADOM.
- C. It allows the same administrator to lock more than one ADOM at the same time.
- D. It is used to validate administrator login attempts through external servers.

Answer: B,C

Explanation:

3.An administrator has assigned a global policy package to custom ADOM1. Then the administrator creates a new policy package, Fortinet, in the custom ADOM1.

Which statement about the global policy package assignment to the newly-created policy package Fortinet is true?

- A. When a new policy package is created, it automatically assigns the global policies to the new package.
- B. When a new policy package is created, you need to assign the global policy package from the global ADOM.
- C. When a new policy package is created, you need to reapply the global policy package to the ADOM.
- D. When a new policy package is created, you can select the option to assign the global policies to the new package.

Answer: A

4.Refer to the exhibit.

An administrator has created a firewall address object which is used in multiple policy packages for multiple FortiGate devices in an ADOM.

When the installation operation is performed, which IP/Netmask will be installed on managed devices for this firewall address object?

- A. 192.168.0.1/24 on Remote-FortiGate
- B. 10.200.1.0/24 on Remote-FortiGate
- C. If no dynamic mapping is defined for other FortiGate devices, the object will not be installed
- D. The FortiManager administrator can choose the value for the firewall address object in the Install Wizard for Remote-FortiGate

Answer: B

5.An administrator is replacing a device on FortiManager by running the following command:
execute device replace sn <devname> <serialnum>.

What device name and serial number must the administrator use?

- A. Device name and serial number of the original device.
- B. Device name and serial number of the replacement device.
- C. Device name of the replacement device and serial number of the original device.

D. Device name of the original device and serial number of the replacement device.

Answer: D
